

AMACO UNDERGLAZES

Amaco Velvet Underglazes

AMACO Velvet semi-translucent underglazes offer two finish possibilities. When left unglazed, they have the appearance of velour or velvet. They will assume a soft, satin matte finish when glazed with AMACO® Transparent Matt glaze and will intensify in color when covered with an AMACO® Clear Transparent Gloss glaze. Velvets 380-384 have a unique formula that makes them very versatile. They can be used in detailed design work as a Cone 05/06 underglaze, or they can be fired up to Cone 6 and maintain their intensity and brightness. All the Velvets are very rich colors that can be used for an all-over coverage similar to an opaque underglaze. They fire true to color as applied from the jar and may be intermixed to create a palette of hundreds of colors. The colors may be brushed on green ware, or on mature Cone 04 (1971°F, 1077°C) bisque, then a covering glaze applied. Velvets tolerate a wide firing range with recommended firing temperature being that of the clay.

NOTE: V-317 Medium Pink will change color and blister at Cone 5. V303 Terra Cotta will fade away when glazed over. If you need to use this color in a glaze, then substitute with V366 Teddy Bear Brown. Velvets underglazes are formulated for use without a glaze cover. They should not be used on surfaces that come into contact with food or drink. AMACO® glazes LG-9, LG-10, F-10, and HF-9 are recommended as clear glazes over Velvets. V-327 will appear Green Turquoise under LG-9 and Blue Turquoise under LG-10. AMACO Velvet Underglazes have only been tested and approved as dinnerware safe when applied under LG-10 Clear Glaze. Other glazes may also be used. Tableware producers must have all finished ware tested and approved as safe for dinnerware through a certified laboratory due to possible variations in firing temperature and possible contamination.

Arroya Specialty Glazes

Lead Free Cone 06-05. Arroya glazes are textured and produce a unique carved effect when fired. Designed for use over gloss and matte unfired glazes, Arroya glazes are best applied with a fully loaded fan blender for all-over coverage or with a sponge when using a pouncing method. The heavier the application, the larger the break-up effect and the more matte the finish. Recommended firing temperature for Arroya glazes is Cone 06-05 (1855°1911°F, 1013°-1044°C). These glazes must be applied to mature Cone 04 (1971°F, 1077°C) bisque.

AMACO TEACHER'S CHOICE - CONE 05 GLAZES

Teacher's Choice gloss glazes are **completely intermixable** so they can be blended with each other or with any of the new AMACO Teacher's Palette (TP) glazes to create an infinite color palette. The eight TC glazes are AP NON-TOXIC, LEAD FREE, dinnerware safe, bright and colorful, and are safe for use by artists of any age.

item #	Description	1 Gallon	Item #	Description	1 Gallon
TC-1	Black	\$59.00	TC-41	Green	\$59.00
TC-11	White	\$59.00	TC-58	Red	\$59.00
TC-21	Blue	\$59.00	TC-60	Yellow	\$59.00
TC-32	Brown	\$59.00	TC-64	Orange	\$59.00

Sun Strokes

Vivid reds, oranges, yellow and green! Six intense special underglazes specifically formulated for Cone 06-05 (1855°-1911°F, 1013°-1044°C) in oxidation and raku firings-with or without a clear glaze. Clear glaze smooths out and brightens the colors. Apply two even coats to bisque. When using clear glaze, it must be applied over the decorated object before firing of the underglaze.

No. SP-10 clear transparent glaze has been developed for use in conjunction with these underglaze colors for one stroke application. For all-over coverage of the Sun Strokes underglazes, any lead containing glaze will give excellent results. Apply one even coat on a mature Cone 04 (1971°F, 1077°C) bisque. Fire to Cone 06-05 (1855°-1911°F, 1013°-1044°C).
